Total Semester Credit					23

Course Code: 19CM3BS01T	Subject Name: Mathematics-III	L-T-P: 3- 0- 0	Credit: 3
--	--	---------------------------------	----------------------------

COURSE OBJECTIVES:

The course should enable the students to:

1. Enrich the knowledge of probability on single random variables and probability distributions.
2. Apply the concept of correlation and regression to find covariance. Analyse the given data for appropriate test of hypothesis Understand the foundations for classical inference involving confidence intervals and hypothesis testing. Knowledge of Numerical method for solving mathematical problems.

SYLLABUS:

Module-1 (8 Hours)

Random variables:

Discrete and continuous random variables, probability distribution of a random variable. Some characteristic of probability distribution. Probability mass function and probability density functions; Mathematical expectation: Mean, Variance and standard deviation of a probability distribution.

Module-2 (8 Hours)

Binomial distribution:

Mean and variances of Binomial distribution, Recurrence formula for the Binomial distribution; Poisson distribution: Poisson distribution as a limiting case of Binomial distribution, mean and variance of Poisson distribution, Recurrence formula for the Poisson distribution; Normal distribution; Mean, Variance, Characteristics of normal distribution.

Module-3 (10 Hours)

Methods of Sampling:

Estimation, point and interval estimation, Basic data analysis, setting of hypothesis, null hypothesis and alternate hypothesis, testing of hypothesis, type I and type II errors, critical region, confidence interval, level of significance. One sided test, two sided test.

Chi-square test:

Goodness of fit and test of association.

Correlation:

Coefficient of correlation, Computation of correlation coefficient, Regression: Lines of regression and their properties.

Module-4

(8 Hours)

Root Finding:

Introduction, Numerical solution by Bisection Method, Newton Raphson method, Secant method, fixed point method. Interpolation: Lagrange, Newton forward, Backward, Divide Difference Method.

Module-5

(10 Hours)

Numerical Integration:

Trapezoidal Method, Simpson's 1/3 rule, Gauss-quadrature 2 & 3 points method, Solution of First Order Differential equation by Euler's method, Modified Euler's method, Runge-Kutta 4th order and Predictor & Corrector method(Adams-Bashforth Method).

COURSE OUTCOMES:

On completion of this course, students are able to:

1. Use the basic probability rules, discrete and continuous probability distributions, including requirements of mean and variance and making decisions.
2. Identify the characteristics of different discrete and continuous distributions. Identify the type of statistical situation to which different distributions can be applied.
3. Use of continuous distribution various hypothesis of testing, Employ the principles of linear regression and correlation and significance of the correlation coefficient.
4. Use of the Numerical method for finding roots, fitting the data into a polynomial equation, integrating any integration and solve any first order ode with initial condition.

TEXT BOOKS:

1. E. Kreyszig, *Advanced Engineering Mathematics*, 10th Edition, Willey, Columbus, Ohio.
2. Richards A Johnson, Irvin Miller and Johnson E Freund, *Probability and Statistics for Engineering*, 9th Edition, PHI.
3. M. K. Jain, S.R.K. Iyenger and R.K. Jain, *Numerical Methods for Scientific and engineering Computations*, New age International Publication (P) Ltd.

REFERENCE BOOKS:

2. Rohit Khurana, Kanti B. Datta, *Engineering Mathematics*, Cengage Publications.
3. Jay I. Devore, *Probability and Statistics for Engineering and the Sciences*, 8th Edition, Cengage.
4. S. Arora, Sumeet Arora, P. N. Arora, *Comprehensive Statistical Methods*, Schaum Series
5. B. V. Raman, *Higher Engineering Mathematics*, Mc-Graw Hills Education, New Delhi
6. B. S. Grewal, *Higher Engineering Mathematics*, 42nd Edition, Khanna Publishers, New Delhi

Subject Code: 19CM3HS01T	Subject Name: Organizational Behavior	L-T-P: 3-0-0	Credit: 3
---	--	-------------------------------	----------------------------

COURSE OBJECTIVES:

1. Developing an understanding of the behaviour of individuals and groups inside organizations by enhancing the skills in appreciating individuals, interpersonal, and group effectiveness.
2. Through this course students will develop theoretical and practical insights and problem-solving capabilities for effectively managing the organizational processes.
3. The course will enable to equip students to understand the organizational change and cultural expansion in an organization context.

SYLLABUS:

Module-1 **(6 Hours)**

Fundamentals of OB:

Definition, scope and importance of OB, Relationship between OB and the individual, Evolution of OB, Models of OB. Learning; Theories and their applications

Module-2 **(12 Hours)**

Foundations of Individual Behavior:

Personality and values: Definition and importance of Personality for performance, The Myers-Briggs Type Indicator and The Big Five personality model, Significant personality traits suitable to the workplace (personality and job – fit theory), Personality Tests and their practical applications. Attitude; ABC Model. Perception: Meaning and concept of perception, Factors influencing perception, Selective perception, Perceptual errors.

Motivation: Definition & Concept of Motive & Motivation, The Content Theories of Motivation (Maslow’s Need Hierarchy & Herzberg’s Two Factor model Theory), The Process Theories (Vroom’s expectancy Theory & Porter Lawler model), Contemporary Theories – Equity Theory of Work Motivation.

Module- 3**(8 Hours)****Foundations of Group Behavior:**

Group Dynamics, Types of Groups, The Five – Stage Model of Group Development. Developing Work Teams, Team Effectiveness & Team Building.

Leadership:

Concept, Types & Styles of Leadership, Traditional & Contemporary theories of leadership Success stories of today's Global and Indian leaders.

Module-4**(10 Hours)****Foundations of Organizational Behavior:**

Organizational Culture; creating and maintenance. Organizational Change; concept and technique and theories of change. Organizational Development; concept and methods of doing development.

COURSE OUTCOMES:

1. Students will understand the essential of maintaining the inter-personal relationships in organizations.
2. Personality factors will be effectively used to understand the communication among groups.
3. The reasons for conflict will be known and prescriptive methods can be devised to enhance higher productivity in organizations.
4. Being an employee in an organization the importance of organizational change and culture can be known to all.

TEXT BOOK:

1. Robbins, Judge, Sanghi, *Organizational Behaviour*, 9th Edition, Pearson, 2019

REFERENCE BOOKS:

1. K. Awathappa, *Organizational Behaviour*, 11th Revised Edition, Himalaya Publishing House, 2013
2. VSP Rao, *Organizational Behaviour*, 4th Edition, Excel, 2009

3. Moorhead, Griffin, *Introduction to Organizational Behaviour*, 11th Edition, Cengage, 2014
4. Parek ,*Understanding Organizational Behaviour*, 4th Edition, Oxford,2016

DIGITAL LEARNING RESOURCES:

Course Name	Organizational Behaviour
Course Link	https://epgp.inflibnet.ac.in/Home/ViewSubject
Course Instructor	

Subject Code: 19CM3HS02T	Subject Name: Engineering Economics & Costing	L-T-P: 3- 0- 0	Credit: 3
------------------------------------	---	--------------------------	---------------------

COURSE OBJECTIVES:

1. Aware the students about general economic conditions of a country, and how engineers can benefit from this study of demand, supply and other micro-economic studies.
2. The objective is to study various factors of production, laws of production in short-run as well as in long-run, and the behavior of cost curves with regard to output.
3. The course helps engineers determine price of a commodity, and also let them know the production level at which a firm would break even.
4. The course will help engineers know about financial system of our country including the banking system and its operation.
5. This course will enable engineers to take crucial investment decisions using some financial tools and techniques.
6. This course helps engineers deal with public projects. It also helps in determining depreciation of long-term assets and its impact on firm's profitability

SYLLABUS:

Module-1 (8 Hours)

Introduction to Economics:

Definition, scope and nature of economics, consumption laws, demand & supply analysis, elasticity of demand & supply, indifference curve analysis.

Module-2 (10 Hours)

Production:

Factors of production, production function, law of variable proportion, laws of return to scale, elasticity of factor-substitution, optimal combination of factor-inputs, production efficiency, economies of scales, Cost of Production: types of costs, economic costs: fixed cost and variable costs, short-run and long-run cost functions.

Module-3 (10 Hours)

Market Structure:

Pure competition, perfect competition, imperfect market, monopoly and oligopoly. Indian Banking System, Functions and Roles of Commercial Banks and Reserve Bank of India.

Module-4**(12 Hours)**

Time value of money and interest formulae, Nominal and effective rate of interest, Present, Annual and Future worth analysis, Rate of Return Analysis, Cost-Benefit analysis in Public sector projects.

Module-5 (as per choice of faculty)**(8 Hours)**

Portion covered can be tested through Internal evaluation only not to be included in University examination.

COURSE OUTCOMES:

1. Study of micro-economics concepts like demand, supply and their elasticity shall help engineers apply those concepts in socio-economic problems.
2. Study of Short-run production functions, Long-run production functions, and Scale economies and scale diseconomies would help engineers know how to start business and what is optimum plant size.
3. Determination of equilibrium price and change in it, break-even analysis would help engineers set right price of products as well as know when to start making profit.
4. Study of Money market, Capital market, Functions of banks including RBI, Inflation, and GDP etc. would help engineers know about country's economy and operation of various entities.
5. Study of various financial tools like PW, FW, EAW, and IRR methods and their comparison would help engineers take appropriate financial decisions.
6. Use of B/C Ratio to deal with public projects, methods of calculating depreciation, and after-tax economic evaluations would help engineers prepare financial statements of businesses and to deal with public utility projects.

TEXT BOOK:

1. Deviga Vengedasalam, and Karunakaran Madhavan, *Principles of Economics*, Oxford Publications
2. Riggs, Bedworth and Randhawa, *Engineering Economics*, McGraw Hill Education, India

REFERENCE BOOKS:

1. Sasmita Mishra, *Engineering Economics & Costing*, Prentice Hall of India

2. Sullivan and Wicks, *Engineering Economics*, Pearson
3. D.M. Mithani, *Principles of Economics*, Himalaya Publishing House

DIGITAL LEARNING RESOURCES:

Course Name	Economics, Management and Entrepreneurship
Course Link	https://nptel.ac.in/courses/110/105/110105067/
Course Instructor	Prof. Pratap K. J. Mohapatra, IIT Kharagpur

Subject Code: 19CM3ES01T	Subject Name: Data Structure using C	L-T-P: 3- 0- 0	Credit: 3
---	---	---------------------------------	----------------------------

COURSE OBJECTIVES:

The course should enable the students to:

1. Implementation of different linear data structure.
2. Implementation of non-linear data structures like trees and graphs.
3. Applying different sorting and searching algorithms.

SYLLABUS:

Module-1

(10 Hours)

Abstract Data Types:

Definition and Representation, ADT of rational number, ADT of Stack, Data Structure and ADT. Stack and its usages: reversing string, matching parentheses, in fix to postfix, decimal to binary number. Queue: linear & circular queue, Deque & Applications. Matrix – sparse and dense. Representation of sparse matrix, Transpose & addition of sparse matrices.

Module-2

(8 Hours)

Linked list and its representation: using array, using self referential structure. Singly, circular and double linked lists. Operations on linked list – Insertion, Deletion, Traversals. Usages of Linked list – insertion sort, Addition/multiplication of polynomials. Addition/Multiplication of large numbers.

Module-3

(12 Hours)

Tree: Definition and Terminologies, child and parent nodes, Sub tree, root, leaf node, internal node, height of a tree. Binary, ternary, quad tree. Binary tree traversals. Reconstruction of binary tree from traversals. Binary search tree – inserting a new key, deleting a key, searching a key. AVL tree – inserting a new key into an AVL tree using rotations. B- tree : insertion and deletion using node splitting and merging.

Module-4**(6 Hours)**

Sorting and Searching: Bubble sort, selection sort quick sort and merge sort. Linear and binary search, Fibonacci search.

Module-5**(6 Hours)**

Basic Graph Algorithm: Graph representation – adjacency matrix and list – pros and cons. Graph traversals – Depth First Search and Breadth First Search.

COURSE OUTCOMES:

On completion of this course, students are able to:

1. Apply the basic data structure like stack, queue, linked list, tree and graph on different problems.
2. Compare and differentiate different implementation of data structure.
3. Analyzing the time complexity and space complexity of different sorting and searching algorithms and data structures implementation.

TEXT BOOKS:

1. Gilberg & Forouzan , *Data Structures: A Pseudocode Approach with C*, 2nd Edition, Cengage, Indian Reprint 2016
2. Kruse, Leung, *Data Structures and Program Design in C*, 2nd Edition, Pearson,2008

1. Yedidyah Langsam & Moshe J. Augenstein Aaron M. Tanenbaum, *Data Structures Using C*, 3rd Edition, Pearson, 2009
2. Kurt Mehlhorn and Peter Sanders, *Algorithms and Data Structures: The basic toolbox*, Springer, 2010

DIGITAL LEARNING RESOURCES:

Course Name	Data Structure and Algorithms
Course Link	https://nptel.ac.in/courses/106/102/106102064/
Course Instructor	Dr. Naveen Garg, IIT Delhi

Subject Code: 19EC3ES02T	Subject Name: Analog Electronic Circuits	L-T-P: 3-0-0	Credit: 3
---	---	-------------------------------	----------------------------

COURSE OBJECTIVES:

1. Understand the basics of construction, operation and characteristics of different transistors and its biasing techniques
2. Develop small-signal model to analyze the performance of different amplifier both for low frequency and high frequency operation.
3. Analyze the performance parameters of large signal amplifiers and feedback topologies; extend the concept of feedback in different amplifier and oscillator circuits.

SYLLABUS:

Module-1 **(8 Hours)**

Biasing of BJTs:

Load lines (AC and DC); Operating Points; Different Biasing Techniques; Bias Stabilization; Bias design Examples.

Biasing of FETs and MOSFETs:

Operating point, Load line, Biasing techniques of FETs and design, Bias design: Graphical and analytical Method, Complimentary MOS (Principle of operation).

Module-2 **(12 Hours)**

Small Signal Analysis of BJTs:

Small-Signal Equivalent-Circuit Models; r_e model, Small Signal Analysis of CE, CC, CB amplifiers using r_e model, Hybrid equivalent Model, Graphical determination of hybrid parameter.

Small Signal Analysis of FETs:

Small-Signal Equivalent-Circuit Model, Small Signal Analysis of CS, CD, CG Amplifiers.; Source Follower and Cascaded System.

Two port system approach:

Effects of R_S and R_L on CE amplifier operation, Effects of R_{SIG} and R_L on CS Amplifier, Small signal analysis of Cascade and Cascode configurations, Darlington Connection and Current Mirror Circuits.

Module-3**(6 Hours)****Frequency Response of BJT and FET Amplifiers:**

General Frequency Considerations, Low and High Frequency Analysis of Single Stage Amplifiers, Square Wave Testing of amplifier.

Module-4**(4 Hours)****Operational Amplifier:**

Ideal Op-Amp, Op-Amp Parameters, Open-loop and Closed-loop Gains, OP-AMP application as weighted summer, Differentiator and Integrator, Instrumentation amplifier.

Module-5**(6 Hours)****Feedback amplifier and Oscillators:**

Concepts of negative and positive feedback, Four Basic Feedback Topologies, Advantage of Negative feedback, Principle of oscillation, OP-AMP based sinusoidal Oscillator Circuits: Wien Bridge oscillator and R-C Phase shift oscillator; Crystal Oscillators.

COURSE OUTCOME:

After completion of the course, the student will be able to

1. Analyze and understand the different biasing techniques to have excellent stabilization against internal and external parameter variation.
2. Develop small-signal model to analyze the performance of different amplifier both for low frequency and high frequency operation.
3. Apply the concept of different feedback and feedback topologies in designing various circuits used for amplification and frequency generation.

- Analyze and design operational amplifier based amplifier and oscillator circuits by understanding its characteristics and configuration details.

Subject Code: 19EC3PC01T	Subject Name: Signal and Systems	L-T-P: 3- 0- 0	Credit: 3
---	---	---------------------------------	----------------------------

COURSE OBJECTIVE:

1. Basic knowledge about CT and DT signal and system, modeling concept, and analysis of LTI system
2. To develop expertise in time-domain and frequency domain analysis of CT and DT signals and systems.

SYLLABUS:

Module-1 (10 Hours)

Introduction to Signals and Systems: Continuous and Discrete Time Signals and Systems:

Continuous time and Discrete signal, Classification of CT and DT signals: energy, power, periodic, Aperiodic, even, odd, random, causal, anti-causal, standard signals, CT and DT system Classification : linear, non linear, time varying, time invariant, causal, non causal, stable, unstable, static, dynamic, Mathematical operations on CT and DT signals : amplitude scaling, time scaling, time shifting, folding, addition, multiplication, Convolution and Correlation of CT and DT signals: Convolution properties, correlation of energy and power signals, properties of correlation.

Module-2 (6 Hours)

Continuous Time Fourier Series and Fourier Transform:

Introduction, Fourier Series (FS) : Trigonometric, exponential , Gibb’s phenomena, properties of Fourier series, Fourier Transform (FT) for CT signals: Introduction, FT of aperiodic signals, Convergence of FT, and Fourier Transform (FT) and its properties, FT of periodic signals, Analysis of CT systems using FT, energy spectral density and power spectral density.

Module-3 (7 Hours)

Laplace Transform:

Concept of complex frequency “S” Definition of Laplace transform and inverse Laplace transform, condition for existence, Laplace transform theorems, Differentiation and Integration,

Concept of initial condition, Laplace transform of commonly used functions (sine, cos, unit step function etc.), Initial value theorem, Final value Theorem

Module-4 **(6 Hours)**

Discrete Time Fourier Series and Discrete Time Fourier Transform:

Introduction, Discrete time Fourier Series (DTFS): Evaluation of DTFS coefficients and Fourier Spectra, properties of DTFS, DTFT of aperiodic DT signals, periodicity, convergence, and properties.

Module-5 **(7 Hours)**

Z transform:

Z transform: Introduction, One sided and Two sided Z transform, Relationship with other transform, ROC, Properties, Inverse Z transform by long division, residue method and partial fraction method, Analysis of Linear Time Invariant (LTI) DT system using Z transform.

COURSE OUTCOME:

Upon successful completion of this course the students will be able to:

1. Be able to describe continuous time signals and analyze the response of continuous time LTI system using different types of time domain analysis.
2. Able to analyze continuous time signal in frequency domain by using different properties of Fourier series and Fourier transform.
3. Be able to describe discrete time signals and analyze the response of discrete time LTI system using different types of time domain analysis.
4. Able to understand frequency domain analysis of Discrete time signal and system using various transform and its properties

1. I. J. Nagrath, S. N. Sharan, and R. Ranjan, S. Kumar, *Signals and Systems*, 2nd Edition, Tata McGraw Hill Education Private Limited, 2001, New Delhi.
2. Ramesh Babu, *Signals and Systems*, 4th Edition, Scitech Publication, 2010, India.

DIGITAL LEARNING RESOURCES:

Course Name	Signals and Systems
Course Link	https://nptel.ac.in/courses/117/104/117104074/
Course Instructor	Prof. K.S. Venkatesh, Department of Electrical Engineering, IIT Kanpur

Subject Code: 19EC3PC02T	Subject Name: Electronics Instrumentation and Measurement	L-T-P: 3- 1- 0	Credit: 4
------------------------------------	---	--------------------------	---------------------

COURSE OBJECTIVE:

1. Exposure to different types of measurement standards and errors.
2. To familiar with different measurement techniques of resistance, inductance and capacitance
3. To differentiate and expose to the working principle of analog and digital measuring instruments.
4. To understand the basics working and design principles of different generator and display devices.

SYLLABUS

Module-1: (6 Hours)

Measurement Systems, Standards, and Errors:

Standard Classifications, IEEE standards, Types of errors, accuracy, precision, resolution, significant figures, measurement error combinations, basics of statistical analysis

Module-2: (8 Hours)

Measurement of Resistance, Inductance and Capacitance:

(a) Resistance: Measurement of Low Resistance by Kelvin's Double Bridge, Measurement of Medium Resistance, Measurement of High Resistance, Measurement of Resistance of Insulating Materials, Portable Resistance Testing set (Mega ohm meter) (b) Inductance: Measurement of Self Inductance by AC Bridges (Maxwell's, Hay's, and Anderson Bridges), Measurement of Mutual Inductance by Felici's Method. (c) Capacitance: Measurement of Capacitance by AC Bridges (Schering & Wien's Bridge).

Module-3 (8 Hours)

Analog & Digital Electronic Instruments:

Transistor voltmeter circuits, opamp voltmeter circuits, AC electronic voltmeter, Current measurement with electronic Instruments, Digital Voltmeter, Ramp generator DVM, Dual Slope type DVM, Range changing, Digital multimeters.

Module-4 (6 Hours)

Signal generators:

Wien bridge oscillator, Square wave conversion, Function generator, pulse generator, Frequency Counters, Frequency synthesizer

Module-5 (8 Hours)

CRO & Special purpose oscilloscopes

Cathode Ray Tube, Deflection amplifiers, Waveform display, Time Base, Dual Trace Oscilloscope, Measurement of voltage, frequency and phase, Delayed Time base Oscilloscopes, Digital storage oscilloscopes, DSO applications.

COURSE OUTCOME:

After completion of the course, the student will be able to

1. Identify and analyse the standards of measurements and different errors associated.
2. Measure different unknown quantities (R,L,C) based on its range and application.
3. Analyse the basic working principles/techniques of various electronic measuring instruments.
4. Acquire the analysing and designing skills of signal generation and displaying devices

Course Link	https://nptel.ac.in/courses/108/105/108105153/
Course Instructor	Prof. Avishek chatterjee, Department of Electrical Engineering, IIT Kharagpur

Subject Code: 19CM3MC01T	Subject Name: Environmental Science and Engineering	L-T-P: 3-0-0	Credit: 0
---	--	-------------------------------	----------------------------

COURSE OBJECTIVE:

1. To provide insight about impact of the humans activities on environment and impact of environment on the humans & its health.
2. To understand the basic problem of anthropogenic environmental pollution
3. To gain comprehensive knowledge about the social problem arising out of industrialization.
4. To familiarize with the environmental ethics and act related to environment.

SYLLABUS:

Module – 1

(8 Hours)

Ecological Concepts and Natural Resources:

Ecological perspective and value of environment. Ecosystem: Concept, structure & Function of ecosystem; Energy cycle, Food Chain, & Food Web; Ecological pyramid, types; Biodiversity; Ecological Succession: Type of ecosystem: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystem. Geochemical Cycle: Water cycle, Carbon cycle, Oxygen cycle, Nitrogen cycle, etc., Environmental gradients, Tolerance levels of environment factor, Indian Environmental Law; Environmental Auditing; Environment Impact Assessment: Origin and procedure of EIA, Project Screening for EIA, Scope studies, Preparation and review of EIS.

Module-2

(8 Hours)

Water quality standards and parameters, Assessment of water quality, Organic content parameters, Types, sources and consequences of water pollution; Ground water Contamination, Water table and Aquifer, Ground water recharge; Water Treatment: Water treatment processes, Pre-treatment of water, Conventional process, Advanced water treatment process.

Waste Water Treatment: DO and BOD of Waste water treatment process, pretreatment, primary and secondary treatment of waste water, Activated sludge treatment: Anaerobic digestion and its microbiology, Reactor configurations and methane production. Application of anaerobic digestion.

Module-3**(8 Hours)****Air Pollution:**

Air pollution and pollutants, criteria pollutants & non-criteria pollutants, Acid deposition, Global climate change –green house gases, Ozone layer Depletion, Smog; Industrial Air Emission Control: Flue gas desulphurization, NO_x removal, Fugitive emissions. Methods for control of particulate air pollutants (Mechanical device, Fabric Filtration, scrubber, Electrostatic precipitator)

Module-4**(8 Hours)**

Solid Waste Management Source classification and composition of MSW: properties and separation, storage and transportation, MSW Management, Waste minimization of MSW, Reuse and recycling,

Hazardous Waste Management, Hazardous waste and their generation, Transportation and treatment of hazardous waste: Incinerators, Inorganic waste treatment, handling of treatment plant residue. Waste minimization techniques.

Noise Pollution: Physical Properties of sound, Noise criteria, Noise Standards, Noise measurement, Noise control.

Module-5**(8 Hours)**

Occupational Safety and Health Acts, Safety procedures, Type of Accidents, Chemical and Heat Burns, Prevention of Accidents involving Hazardous substances, Human error and Hazard Analysis. Hazard Control Measures in integrated n steel industry, Petroleum Refinery, L.P.G. Bottling, Pharmaceutical industry. Fire Prevention – Detection, Extinguishing Fire, Electrical Safety, Product Safety. Safety Management- Safety Handling and Storage of Hazardous Materials, Corrosive Substances, Gas Cylinders, Hydro Carbons and Wastes. Personal Protective Equipment.

Subject Code: 19CM3ES01L	Subject Name: Data Structure using C Lab	L-T-P: 0- 0- 2	Credit: 1
---	---	---------------------------------	----------------------------

Prerequisites Programs:

1. Create a structure that stores a point in 2D. Accept 3 such points and find out the area of the triangle enclosed by these three points.
2. One array of numbers to be sorted. The no of element of the array is an user input. Create the array dynamically, accept its members and sort the array.

Programs for Evaluation Lab:

1. **(Integer stack simulation)** Write a structure for an integer stack, implement function push, pop, and pick, IsEmpty and IsFull function. Write a main function and call the functions based on an option entered.
2. **(Palindrome checking using stack)** Implement a stack of characters and create mystack.h. Write a program to check whether an entered string is a palindrome or not. One need to include mystack.h for calling the functions of character stack.
3. **(Simulating circular queue)** Defining structure of a circular queue (with a counter), write functions for inserting, deleting and counting no of elements present in the queue. Write functions IsFull and IsEmpty also. Write main function to call them.
4. **(Infix to Postfix)** Write a program to convert an infix expression into its corresponding postfix expression. The expression contains alphabets, operators and parentheses. During the conversion all possible checks for the correctness should be checked. [(a+b)/(c-d) would output ab+cd-/, ((a+b)^c-d would give error as “unmatched parenthesis]
5. **(Insertion sort)** A singly linked list gives a better way to implement insertion sort. A flat file contains some unknown number of integers. Implement insertion sort using a singly linked list that reads the next integer from the file and insert it into a linked list in its proper position. Write a function that prints the list after all elements is properly inserted into the linked list.
6. **(Polynomial addition)** Represent a polynomial of a single variable using a singly linked list. Write functions createPolynomial that stores one polynomial in a singly linked list. Write a function to add two such linked lists.

7. **(BST simulation)** Declare a binary search tree where information at each node would be a single integer. Write functions for inserting a key, deleting a key from the tree. Write recursive traversal routines. After each insertion/deletion find all traversal results.
8. **(Bubble sort)** One array of numbers to be sorted. The no of element of the array is a user input. Create the array dynamically, accept its members and sort the array using bubblesort algorithm. Also count the total number of swaps.
9. **(Quick sort)** Write a function to implement recursive quick sort algorithm and using this function sort an array of integers. Write another function to search for a key in this sorted array using binary search.
10. **(Merge Sort)** Implement recursive mergesort using an array of fixed size and hence sort an array of double numbers using this function.
11. **(Heap sort)** Implement heapify, build heap and heapsort routines. Apply heapsort to sort an array of numbers. Write a function to search for a given key in this sorted array using sequential search.

(BFS traversal) Clearly declaring data structure of a graph, Write functions to read a directed graph from a flat file and to implement BFS routine in a directed graph. Show the result of BFS traversal in distance and previous arrays.

Subject Code: 19EC3ES02L	Subject Name: Analog Electronic Circuits Lab	L-T-P: 0- 0- 2	Credit: 1
---	---	---------------------------------	----------------------------

COURSE OBJECTIVE:

1. To illustrate the students different electronic circuit and their application in practice.
2. To impart knowledge on assessing performance of electronic circuit through monitoring of sensitive design and modeling parameters.

LIST OF EXPERIMENTS:

(At least 10 out of 13 experiments should be done)

1. Determination of cut- off and saturation voltage of a BJT and its application as a switch.
2. Assemble and test of BJT bias circuits: Fixed bias and feedback bias.
3. Design, assemble and test of BJT bias circuits: Voltage divider bias
4. Design, assemble and test of JEET bias circuits: fixed bias and self bias.
5. Design, assemble and test of BJT common-emitter circuit – D.C and A.C performance: Voltage gain, input impedance and output impedance with bypassed and un-bypassed emitter resistor.
6. Design, assemble and test of BJT emitter-follower – D.C and A.C performance: A.C. voltage gain, input impedance and output impedance.
7. Design, assemble and Test of JFET/MOSFET common-source amplifiers – D.C and A.C performance: Voltage gain, input impedance and output impedance.
8. Determination of Bandwidth of a common-emitter amplifier from its frequency response.
9. Determination of Bandwidth of a BJT CE amplifier using Square wave testing.
10. Design and test of Differential amplifier circuits with its DC and AC performance.
11. Design and test of Darlington connection/ current mirror circuits.
12. Graphical determination of h-parameters of a CE amplifier.
13. Design Wien Bridge/R-C phase shift oscillator.

COURSE OUTCOME:

After completion of the course, the student will be able to

1. Test and experiment different types of BJT/JFET based electronic circuit and analyze their operation under different operating conditions.
2. Evaluate possible causes of discrepancy in experimental observations in comparison to theoretical outcome.
3. Practice different types of wiring and instruments connections keeping in mind technical, Economical, safety issues.
4. Prepare professional quality textual and graphical presentations of laboratory data and Computational results.

Subject Code: 19EC3PC01L	Subject Name: Signal and Systems Lab	L-T-P: 0- 0- 2	Credit: 1
---	---	---------------------------------	----------------------------

COURSE OBJECTIVE:

The primary objective of this course is to provide a thorough understanding and analysis of signals in time and frequency domain using simulation software.

LIST OF EXPERIMENTS:

1. Introduction to simulation software environment, constants, variables and expressions
2. Creation of arrays and matrices in simulator and their manipulation
3. Use of control structures and writing of programs and function
4. Generation and plotting of various continuous time signals
5. Generation and plotting of various discrete time signals
6. Linear Convolution of CT and DT signals
7. Linear Correlation of CT and DT signals.
8. Computation of trigonometric Fourier Series of CT periodic signals
9. Computation of exponential Fourier Series of CT periodic signals
10. Computation of Fourier Transform of CT aperiodic signals
11. Computation of Laplace transform and Inverse Laplace Transform of signals
12. Computation of Z transform and inverse.

COURSE OUTCOME:

Upon successful completion of this course the students will be able to:

1. Understand basics of simulation software syntax, functions and programming.
2. Generation of various continuous and discrete time signals and signal manipulations.
3. Analyze CT and DT signals using various transforms
4. Analyze linear time-invariant (LTI) systems using various transforms

Subject Code: 19CM3HS01T	Subject Name: Organizational Behaviour	L-T-P: 3-0-0	Credit: 3
---	---	-------------------------------	----------------------------

COURSE OBJECTIVES:

1. Developing an understanding of the behaviour of individuals and groups inside organizations by enhancing the skills in appreciating individuals, interpersonal, and group effectiveness.
2. Through this course students will develop theoretical and practical insights and problem-solving capabilities for effectively managing the organizational processes.
3. The course will enable to equip students to understand the organizational change and cultural expansion in an organization context.

SYLLABUS:

Module-1 **(6 Hours)**

Fundamentals of OB:

Definition, scope and importance of OB, Relationship between OB and the individual, Evolution of OB, Models of OB. Learning; Theories and their applications

Module-2 **(12 Hours)**

Foundations of Individual Behavior:

Personality and values : Definition and importance of Personality for performance, The Myers-Briggs Type Indicator and The Big Five personality model, Significant personality traits suitable to the workplace (personality and job – fit theory), Personality Tests and their practical applications. Attitude; ABC Model. Perception: Meaning and concept of perception, Factors influencing perception, Selective perception, Perceptual errors.

Motivation: Definition & Concept of Motive & Motivation, The Content Theories of Motivation (Maslow’s Need Hierarchy & Herzberg’s Two Factor model Theory), The Process Theories (Vroom’s expectancy Theory & Porter Lawler model), Contemporary Theories – Equity Theory of Work Motivation.

Module-3**(8 Hours)****Foundations of Group Behavior:**

Group Dynamics, Types of Groups, The Five – Stage Model of Group Development. Developing Work Teams, Team Effectiveness & Team Building.

Leadership:

Concept, Types & Styles of Leadership, Traditional & Contemporary theories of leadership Success stories of today's Global and Indian leaders.

Module- 4**(10 Hours)****Foundations of Organizational Behavior:**

Organizational Culture; creating and maintenance. Organizational Change; concept and technique and theories of change. Organizational Development; concept and methods of doing development.

COURSE OUTCOMES:

1. Students will understand the essential of maintaining the inter-personal relationships in organizations.
2. Personality factors will be effectively used to understand the communication among groups.
3. The reasons for conflict will be known and prescriptive methods can be devised to enhance higher productivity in organizations.
4. Being an employee in an organization the importance of organizational change and culture can be known to all.

TEXT BOOK:

1. Robbins, Judge, Sanghi, *Organizational Behaviour*, 9th Edition, Pearson,2019

Course Instructor	

Subject Code: 19CM3HS02T	Subject Name: Engineering Economics & Costing	L-T-P: 3- 0- 0	Credit: 3
------------------------------------	---	--------------------------	---------------------

COURSE OBJECTIVES:

1. Aware the students about general economic conditions of a country, and how engineers can benefit from this study of demand, supply and other micro-economic studies.
2. The objective is to study various factors of production, laws of production in short-run as well as in long-run, and the behavior of cost curves with regard to output.
3. The course helps engineers determine price of a commodity, and also let them know the production level at which a firm would break even.
4. The course will help engineers know about financial system of our country including the banking system and its operation.
5. This course will enable engineers to take crucial investment decisions using some financial tools and techniques.
6. This course helps engineers deal with public projects. It also helps in determining depreciation of long-term assets and its impact on firm's profitability

SYLLABUS:

Module-1 (8 Hour)

Introduction to Economics:

Definition, scope and nature of economics, consumption laws, demand & supply analysis, elasticity of demand & supply, indifference curve analysis.

Module-2 (10 Hours)

Production:

Factors of production, production function, law of variable proportion, laws of return to scale, elasticity of factor-substitution, optimal combination of factor-inputs, production efficiency, economies of scales, Cost of Production: types of costs, economic costs: fixed cost and variable costs, short-run and long-run cost functions.

Module-3 (10 Hours)

Market Structure:

Pure competition, perfect competition, imperfect market, monopoly and oligopoly. Indian Banking System, Functions and Roles of Commercial Banks and Reserve Bank of India.

Module-4:**(12 Hours)**

Time value of money and interest formulae, Nominal and effective rate of interest, Present, Annual and Future worth analysis, Rate of Return Analysis, Cost-Benefit analysis in Public sector projects.

Module-5: (as per choice of faculty)**(8 Hours)**

Portion covered can be tested through Internal evaluation only not to be included in University examination.

COURSE OUTCOMES:

1. Study of micro-economics concepts like demand, supply and their elasticity shall help engineers apply those concepts in socio-economic problems.
2. Study of Short-run production functions, Long-run production functions, and Scale economies and scale diseconomies would help engineers know how to start business and what is optimum plant size.
3. Determination of equilibrium price and change in it, break-even analysis would help engineers set right price of products as well as know when to start making profit.
4. Study of Money market, Capital market, Functions of banks including RBI, Inflation, and GDP etc. would help engineers know about country's economy and operation of various entities.
5. Study of various financial tools like PW, FW, EAW, and IRR methods and their comparison would help engineers take appropriate financial decisions.
6. Use of B/C Ratio to deal with public projects, methods of calculating depreciation, and after-tax economic evaluations would help engineers prepare financial statements of businesses and to deal with public utility projects.

TEXT BOOK:

2. Sullivan and Wicks, *Engineering Economics*, Pearson
3. D.M. Mithani, *Principles of Economics*, Himalaya Publishing House

DIGITAL LEARNING RESOURCES:

Course Name	Economics, Management and Entrepreneurship
Course Link	https://nptel.ac.in/courses/110/105/110105067/
Course Instructor	Prof. Pratap K. J. Mohapatra, IIT Kharagpur

Subject Code: 19EC4ES01T	Subject Name: Digital Electronic Circuits	L-T-P: 3- 0- 0	Credit: 3
---	--	---------------------------------	----------------------------

COURSE OBJECTIVES:

1. To provide insight about the requirement of designing low cost and high speed Digital systems.
2. To gain inclusive knowledge about combinational and sequential logic blocks.
3. To get the idea of designing complex digital circuits.
4. To understand the different types of memory and their working principles.
5. To familiarize with various technologies used for Integrated Circuit design.

SYLLABUS:

Module-1

(6 Hours)

Digital Fundamentals and Binary Codes:

Introduction to Digital System, Binary Data Representation, Codes: BCD, Excess-3, Gray Code, One-Hot Code, ASCII Code, Logic Levels, Logic gates, Boolean Operators and Expressions.

Simplification of Boolean Functions:

Representation of min-terms and max-terms, Simplification of Boolean Functions using K-Map up to 5 variables, K-Map with don't care inputs.

Function Implementations: AND-OR, OR-AND, NAND-NAND, NOR-NOR, AOI, OAI.

Module-2

(8 Hours)

Arithmetic Circuits:

Introduction to Combinational Circuit, Half Adder, Full Adder, Half Subtractor, Full Subtractor, Adder-Subtractor, Binary Parallel Adder, BCD Adder, CLA Adder, Multiplier, Square circuit, Magnitude Comparator.

Combinational Circuits:

Gray –to- Binary and Binary –to- Gray Code Converter, Encoder, Priority encoder, Decoder, Cascading of Decoders, Multiplexer, Cascading of Multiplexer, Function Implementations using Multiplexer, De-Multiplexer, Decoder.

Module-3 (6 Hours)

Sequential Components:

Latches, Flip-Flops, Analysis of Flip-Flops: Functional Table, Characteristic Table, Characteristic Equation, State Diagram, Excitation Table, Timing Diagram, Positive-Edge-Triggered D Flip-Flop, Master-Slave JK-FF, Flip-Flop conversions.

Module-4 (10 Hours)

Sequential Circuits:

Design Procedure, Counter: Asynchronous and Synchronous Counter, **Shift Registers:** Shift of Binary Bits, SISO, SIPO, PISO, PIPO, Ring Counter, Johnson Counter, Design and Analysis of Clocked Sequential Circuits, FSM Fundamentals: Melay and Moore Machines.

Module-5 (6 Hours)

Memory Blocks:

Types of Memory, Memory Decoding, Read-Only Memory (ROM), Random Access Memory (RAM). Logic Families: Characteristics of DTL, RTL, TTL and CMOS Logic.

COURSE OUTCOMES:

1. Acquire basic knowledge about binary codes and the simplification of logic function using Boolean laws and mapping methods.
2. Understand the behavior of combinational and sequential circuits and use them for development of complex digital systems.
3. Acquire fundamental knowledge about the operation of memory and their application towards synchronous circuits.
4. Illustrate the operation of different logic families and their application in designing integrated circuits for serving the mankind in day to day life.

DIGITAL LEARNING RESOURCES:

Course Name	Digital Circuits and Systems
Course Link	https://nptel.ac.in/courses/117/106/117106086/
Course Instructor	Prof. S. Srinivasan Department of Electrical Engineering, IIT Madras

Subject Code: 19EC4PC01T	Subject Name: Network Theory	L-T-P: 3- 0- 0	Credit: 3
---	---	---------------------------------	----------------------------

COURSE OBJECTIVES:

1. To understand Coupled Circuits, Network Topology and Resonance.
2. To analyze transients in Electrical systems using Laplace transforms and harmonic analysis of electrical system by using Fourier series and Fourier Transforms.
3. To evaluate Network parameters of given Electrical network
4. To design basic filter configurations and Construction of electrical network using network synthesis

SYLLABUS:

Module-1

(6 Hours)

Network Theorems and Network Topology :

Network Theorems: (AC Circuits only)

Superposition theorem, Reciprocity Theorem, Thevenin's theorem, Norton's Theorem, and Maximum Power transfer theorem, Tellegen's theorem, Millman's theorem, Compensation theorem. Concept of duality, and dual networks.

Network Topology:

Definitions of branch, node, tree, planar, non-planar graph, incidence matrix, basic tie set schedule, basic cut set schedule.

Module-2

(8 Hours)

Solution of Electrical Networks, Frequency response and Magnetically Coupled Circuit:

Time Domain analysis of RL, RC, RLC circuits, concept of damping, series resonance and parallel resonance, Concept of bandwidth, Q factor, selectivity

Magnetically Coupled Circuits:

Self-inductance, Mutual inductance, Coefficient of coupling, analysis of coupled circuits, Natural current, Dot rule of coupled circuits, Conductively coupled equivalent circuits- problem solving.

Module-3

(6 Hours)

Electrical Circuit Analysis Using Laplace Transforms:

Transient analysis of electrical circuits using Laplace Transforms: First order differential equations, Definition of time constants, R-L circuit, R-C circuit with DC excitation, Evaluating initial conditions procedure, second order differential equations, homogeneous, non-homogenous, problem solving using R-L-C elements with DC excitation and AC excitation, Response as related to s-plane rotation of roots. Solutions using Laplace transform method.

Module-4

(10 Hours)

Two Port Network and Network Functions:

Two Port Networks: Relationship of two port networks, Z-parameters, Y- parameters, Transmission line parameters, h-parameters, Inverse h- parameters, Inverse Transmission line parameters, Relationship between parameter sets, Parallel connection of two port networks, Cascading of two port networks, series connection of two port networks, problem solving including dependent sources also.

Network functions: Significance of Poles and Zeros, Restriction on location of Poles and Zeros, Time domain behavior from Pole-Zero plots.

Module-5

(6 Hours)

Network Synthesis:

Network Synthesis: Realizability concept, Hurwitz property, Positive realness, and properties of positive real functions. Synthesis of R-L, R-C and L-C driving point functions in Foster and Cauer forms.

COURSE OUTCOMES:

At the end of this course, students will demonstrate the ability to

1. Apply network theorems for the analysis of electrical circuits.
2. Obtain the transient and steady-state response of electrical circuits.
3. Analyze two port circuit behavior and also analyze the harmonics with their amplitude and frequency spectrum of electrical system.

4. Design the filter circuit and construct the electrical systems by using synthesis methods.

Subject Code: 19EC4PC02T	Subject Name: Electromagnetic Theory	L-T-P: 3- 0- 0	Credit: 3
---	---	---------------------------------	----------------------------

COURSE OBJECTIVE:

1. To impart knowledge on Diaporas of Maxwell's equations in both static and time varying field.
2. Introduce wave propagation in different medium and its governing law.
3. To impart knowledge on response of EM field during interaction with different boundary along with different polarization.
4. To elucidate Telegraph equations to solve impedance mismatching by smith chart as well as solution of waveguide through the knowledge of Maxwell's equations.

SYLLABUS:

Module-1 **(13 Hours)**

Review of Maxwell's equations for static field:

Maxwell's equations for static field in differential and integral form, Boundary conditions for electrostatics and magnetostatics.

Maxwell's equations for time varying field:

Faraday's Law, Transformer and Motional EMFs, Displacement Current, Maxwell's Equations in Final Forms, Time-Varying Potentials, Time-Harmonic Fields

Module-2 **(6 Hours)**

Electromagnetic Wave Propagation:

Waves in General, Wave Propagation in Lossy Dielectrics, Plane Waves in Lossless Dielectrics, Plane Waves in Free Space, plane Waves in Good Conductors, Power and the Poynting Vector.

Module-3 **(6 Hours)**

EM Wave: Reflection and Refraction:

Polarization of Electromagnetic waves (Linear, Elliptical and Circular), Reflection of a plane wave at Normal incidence and Oblique incidence, Brewster's Angle.

Module-4:**(6 Hours)****Transmission line & Analysis:**

The lumped-element circuit model for transmission line, Telegraph equation, Lossless line and distortion less line, Terminated lossless transmission line, Smith chart, Quarter-wave transformer.

Module-5:**(7 Hours)****Wave Guide:**

Transverse Electric wave propagation in Rectangular Waveguide, Transverse Magnetic wave propagation in Rectangular Waveguide, Impossibility of TEM mode in rectangular waveguide, Rectangular Cavity Resonator.

COURSE OUTCOME:

1. Able to state several laws related to EM fields and apply the vector calculus to describe electromagnetic phenomena.
2. Able to visualize and evaluate wave in spacio domain as well as formulate and solve realistic problems on wave propagation in different medium.
3. Able to apply the knowledge of reflection and the refraction of EM waves to understand the utilization of waves in medical application as well as wireless connection under shading.
4. Able to apply the Telegraph Equations to design simple distributed circuit components and calculate transmission line parameters with impedance measurement using smith chart as well as understand the concept of EM energy transportation through guided device.

Subject Code: 19EC4PC03T	Subject Name: Microprocessor & Application	L-T-P: 3- 0- 0	Credit: 3
---	---	---------------------------------	----------------------------

COURSE OBJECTIVE:

1. Understand the main components and working principle of the Intel 8086 microprocessor.
2. Understand the Memory organization, interfacing and the interrupt concept of 16-bit microprocessor
3. Program and debug in assembly language program
4. Understand the properties and interfacing of the I/O devices using programmable interfacing devices.
5. Understand the basic components and working principle of the Intel 32-bit processor 80386.

SYLLABUS:

Module-1 **(10 Hour)**

8086 Microprocessor:

Introduction: Overview of Microcomputer organization

Intel 8086 Microprocessor: Introduction, 8086 Programmer's model: Register organization,

Hardware Architecture: Bus interface unit (BIU), Execution unit (EU), Pipelined operation, physical address generation and Memory segmentation.

8086 Pin description: Common, Minimum and maximum mode Pin and Signals, Bus cycle and System configuration.

Module-2 **(6 Hours)**

8086 Memory Interfacing and Interrupt technique

8086 Memory Interfacing: External Memory addressing, EPROM and RAM interface with 8086.

8086 Interrupt: Interrupt Processing, sources of interrupt in 8086, Interrupt Instructions, Interrupt types, IVT, Hardware Interrupts and Interrupt priorities.

Module-3 (6 Hours)

8086 Instruction set and programming

8086 Addressing modes, Instruction sets, Assembler directives and programming

Module-4 (12 Hours)

Peripheral interfacing

Introduction to basic I/O interface, I/O interfacing techniques in 8086

Interfacing devices: 8255 PPI, 8254 Timer, 8251 USART, ADC-0808/0809, DAC-0800 interfacing using PPI.

Module-5 (8 Hours)

32-bit Microprocessor 80386

Salient features of 80386, Architecture and Signal Description of 80386. Register Organization of 80386, Hardware Memory organization 80386 Memory management: Real mode, Segment translation, protected mode, Memory paging mechanism and Virtual 8086 Mode.

COURSE OUTCOME:

On Completion of this Subject/ Course the students should be able to:

1. Gain deep knowledge on 8086 microprocessor architecture and pin and signals and demonstrate the memory interfacing and illustrate the use of interrupts.
2. Identify the addressing modes and illustrate the different classification and functions of 8086 microprocessor instructions and apply the knowledge in assembly language programming.
3. Illustrate the design aspect of I/O interface and Design and development of interfacing various I/O devices using programmable peripheral devices with the 8086 microprocessor.
4. Study and understand the architecture and memory management system of 80386 advanced microprocessors.

TEXT BOOK:

DIGITAL LEARNING RESOURCES:

Course Name	Microprocessors and Microcontrollers
Course Link	https://nptel.ac.in/courses/108/105/108105102/
Course Instructor	Prof. Santanu Chattopadhyay, Department of Electronics and Electrical Communication Engineering, IIT Kharagpur

Course Name	Microprocessors and interfacing
Course Link	https://nptel.ac.in/courses/108/103/108103157/
Course Instructor	Prof. Shaik Rafi Ahamed, Department of electrical and electronics engineering, IIT Guwahati

Subject Code: 19EC4PE01T	Subject Name: Sensor and Transducers	L-T-P: 3- 0- 0	Credit: 3
---	---	---------------------------------	----------------------------

COURSE OBJECTIVE:

1. Should be able to mathematically analyze instruments up to first and second order. Also should have understanding of Static and dynamic characteristic's of instruments.
2. Should have knowledge of working principle and characteristic's of major industrial sensor's likes strain gauge, Thermocouple, RTD and Thermistor etc.
3. Should be able to formulate suitable signal conditioning circuits of various sensors.
4. Should have the idea of smart sensors and how it could be used as a transmitter.

SYLLABUS:

Module-1

(Hours)

Elements of a general measurement system:

Measurement system, Static Characteristics: systematic characteristics, statistical characteristics, calibration; Dynamic characteristics of measurement systems: transfer functions of typical sensing elements, step and frequency response of first and second order elements, and dynamic error in measurement systems.

Module-2

(Hours)

Accuracy and Errors in measurement system:

Measurement error of a system of ideal elements, the error probability density function of a system of non-ideal elements and error reduction techniques.

Loading Effects and Two-port Networks: Electrical loading: Thevenin and Norton equivalent circuit and Two-port networks.

Signals and Noise in Measurement Systems: Introduction, Statistical representation of random signals, Effects of noise and interference on measurement circuits, Noise sources and coupling mechanisms and Methods of reducing effects of noise and interference.

Module-3**(Hours)****Sensing elements:**

Resistive sensing elements: potentiometers, Resistance Temperature Detector (RTD), thermistors, strain gages. Capacitive sensing elements: variable separation, area and dielectric; Inductive sensing elements: variable reluctance and LVDT displacement sensors. Electromagnetic sensing elements: velocity sensors

Module-4**(Hours)**

Thermoelectric sensing elements: laws, thermocouple characteristics, installation problems, cold junction compensation.

Elastic sensing elements: Bourdon tube, bellows, and diaphragms for pressure sensing, force and torque measurement.

Piezoelectric sensing elements: Piezoresistive sensing elements and Electrochemical sensing elements

Module-5**(Hours)****Signal Conditioning Elements:**

Deflection bridges: design of resistive and reactive bridges, push-pull configuration for improvement of linearity and sensitivity Amplifiers: Instrumentation amplifier and filters. A.C. carrier systems and current transmitters and IC temperature sensor.

COURSE OUTCOME:

1. Use transient analysis knowledge from basic control system course to understand the response of first order and second order instruments.
2. Should know what calibration is and static and dynamic characteristics.
3. Mathematically formulate every dynamics of sensor and identify its characteristics, drawbacks and compensations.
4. Should be able to analyze instrumentation amplifier, design and select suitable resistive and reactive bridges and understand the idea of an AC carrier system and also architecture of a transmitter.

DIGITAL LEARNING RESOURCES:

Course Name	Sensor and Transducers/Industrial Instrumentation
Course Link	https://nptel.ac.in/courses/108/105/108105064/#
Course Instructor	Prof. Alok Barua, Department of Electrical Engineering, IIT Kharagpur

Subject Code: 19EC4PE02T	Subject Name: Semiconductor Devices	L-T-P: 3-0-0	Credit: 3
---	--	-------------------------------	----------------------------

COURSE OBJECTIVE:

1. To enhance comprehension capabilities of students through understanding the formation of energy band diagram and physics for intrinsic, extrinsic and compensated materials.
2. To study the drift and diffusion current densities due to carrier transport in semiconductors
3. To understand and analyze the physics of depletion under biasing conditions and junction breakdown of PN junction
4. To apply the previous acquired knowledge for analyzing the operation and performance of BJT, MOSFET, JFET etc.

SYLLABUS:

Module-1 (8 Hours)

Basics of Semiconductor and Energy bands:

Formation of energy bands, Metals, Semiconductors, & Insulators, k-space, Density of State, Thermal equilibrium, F-D distribution, Fermi Energy, Electron and hole concentration of Intrinsic and Extrinsic Semiconductors, Variation of Fermi level with doping concentration and temperature, Compensated semiconductor.

Module-2 (8 Hours)

Carrier Transport in Semiconductors:

Carrier Concentration and Mobility, diffusion and drift of carriers, Einstein relation, continuity equation, Injected minority carrier charge, Recombination and generation of charge carriers.

Module-3 (10 Hours)

P- N Junction:

Basic device technologies for fabrication of a p-n junction, Energy band diagram, Built-in potential, Depletion layer model: charge, field and potential profiles in p-n junctions, current flow at biased P-N junctions, diode equation and diode characteristics, temperature dependence,

Capacitance of p-n junction diode, Junction Breakdown, Metal–Semiconductor junction (Schottky and Ohmic contact).

Module-4 (8 Hours)

Bipolar Junction Transistor:

Introduction, Modes of operation; Minority Carrier distribution, Collector current, Base current, current gain factors, Base width Modulation, Breakdown mechanism, Equivalent Circuit Models: Ebers -Moll Model.

Module-5 (6 Hours)

MOSFET:

MOS structure, MOS capacitor operation with band diagram, Flatband and threshold voltage, Frequency effect, Fixed oxide and interface charge effect, Basic operation of Enhancement & Depletion mode MOSFET, IV characteristics.

COURSE OUTCOME:

1. Impart knowledge in physical properties of semiconducting materials that affects the operation of semiconductor devices
2. A solid understanding of the operating principles of conventional/advanced semiconductor devices
3. Apply the knowledge of mathematics and engineering to solving practical problems to develop semiconductor devices
4. Acquire fundamental knowledge about VLSI designing and semiconductor device fabrication

DIGITAL LEARNING RESOURCES:

Course Name	Solid State Devices
Course Link	https://nptel.ac.in/courses/117/106/117106091/
Course Instructor	Prof. S. Karmalkar, Department of Electrical Engineering, IIT Madras

Subject Code: 19EC4PE03T	Subject Name: Probabilistic Theory & Stochastic Process	L-T-P: 3- 0- 0	Credit: 3
------------------------------------	---	--------------------------	---------------------

COURSE OBJECTIVES:

The objective of this course is:

1. To introduce fundamental probability concepts.
2. How to deal with multiple random variables? Conditional probability and Conditional expectation, joint distribution and independence, mean square estimation
3. To provide necessary basic concepts in probability and random processes for applications such as random signals, linear systems etc in communication engineering

SYLLABUS:

Module-1 (6 Hours)

Probability: Various definitions of probability, The Axioms of probability, basic properties derived from the axioms, conditional probability, total probability and Bayes' Theorem, Independence of events, Repeated Trials: combined experiments and independence

Module-2 (8 Hours)

Random variables:

Distribution functions, Density functions, specific random variables: examples of continuous, discrete and mixed random variables, Conditional distribution and density functions, Expectation, variance, moments of random variable, Moment generating functions, Transformation of a random variable

Module-3 (8 Hours)

Multiple random variables:

Vector random variables, Joint distribution function and its properties, Joint density and its properties, marginal density functions, Independence of random variables, distribution and density of a sum of random variables, Central limit theorem.

Module-4**(8 Hours)****Random processes:**

Random process: classification, Stationary and independence- wide-sense stationary, strict-sense stationary, autocorrelation function, cross-correlation function, covariance functions, Gaussian random processes, complex random processes.

Module-5**(6 Hours)****Spectral Characteristics of Random processes:**

Introduction, power spectrum and its properties, relationship between power spectrum and autocorrelation function, cross power spectral density and its properties, relation between cross power spectrum and cross-correlation function.

COURSE OUTCOMES:

At the end of the course student will be able to

1. Understand the axiomatic formulation of modern Probability Theory and analyze random variables as an intrinsic need for the analysis of random phenomena.
2. Characterize probability models and function of random variables based on single & multiples random variables.
3. Evaluate and apply moments & characteristic functions and understand the concept of inequalities and probabilistic limits.
4. Understand the concept of random processes and determine covariance and spectral density of stationary random processes.

Subject Code: 19EC4ES01L	Subject Name: Digital Electronic Circuits Lab	L-T-P: 0- 0- 2	Credit: 1
---	--	---------------------------------	----------------------------

COURSE OBJECTIVES:

To understand the procedure for designing fundamental building blocks and observes their outputs.

LIST OF EXPERIMENTS:

1. Digital Logic Gates: Investigate logic behavior of AND, OR, NAND, NOR, EX-OR, and Inverter gates.
2. Gate-level minimization: Two level and multi-level implementation of Boolean functions.
3. Design and Testing of combinational circuits: Half-Adder, Half-Subtraction, and Full Adder.
4. Design of binary to Gray, Gray to Binary Code Converter, and Seven Segment Display Decoder.
5. Design and implementation of 2-bit Binary Multiplier
6. Testing of Multiplexer and function implementation using suitable Multiplexer.
7. Testing of Decoder and function implementation using suitable Decoder.
8. Testing of basic SR Latch and FFs: D-FF, JK-FF
9. Design and Testing of SISO, SIPO Shift Registers
10. Design and testing of 3-bit binary Asynchronous UP-Counter and Modulo-6 counter.

COURSE OUTCOMES:

1. Test the different digital ICs and use them for designing different combinational and sequential circuits.
2. Verify and debug the outputs for developing an error free circuit.

Subject Code: 19EC4PC01L	Subject Name: Network Theory Lab	L-T-P: 0- 0- 2	Credit: 1
---	---	---------------------------------	----------------------------

COURSE OBJECTIVES:

1. To understand Resonance and coupled circuits.
2. To study the Steady state and Transient behavior of Electrical Circuits
3. To check the applicability of Network theorems for calculating the Electric circuit response.
4. To evaluate Network parameters of given Electrical network and also understand the basic filter circuit response to design

LIST OF EXPERIMENTS:

(Select any 8 experiments from the list of 11 experiments [Using Hardware])

1. Verification of Network Theorems in DC circuits. (Norton's theorem, Reciprocity theorem, Maximum Power transfer theorem, Milliman's theorem & Compensation Theorem).
2. Verification of Network Theorems in AC circuits. (Superposition theorem, Reciprocity theorem, Maximum Power transfer theorem).
3. Study of DC and AC Transients for R-L, R-C & R-L-C circuits using storage oscilloscope.
4. Determination of circuit parameters: Open Circuit and Short Circuit parameters.
5. Determination of circuit parameters: Hybrid and Transmission parameters.
6. Frequency response of Low pass and High Pass Filters.
7. Frequency response of Band pass and Band Elimination Filters.
8. Determination of self inductance, mutual inductance and coupling coefficient of a single phase two winding transformer representing a coupled circuit.
9. Study of resonance in R-L-C series circuit using oscilloscope.
10. Study of resonance in R-L-C parallel circuit using oscilloscope.
11. Spectral analysis of a non-sinusoidal waveform.

Select any 2 experiments from the list of 4 experiments [Using Simulation]

1. Determination of Response of different DC circuits using PSpice
2. Determine the frequency response of Series RLC and Parallel RLC circuit Using PSpice.
3. Determination self inductance, Mutual inductance , of Coupled coils and their response using PSpice
4. Evaluation of Two – port Network parameters using PSpice

COURSE OUTCOMES:

At the end of this course, students will demonstrate the ability to

1. Apply network theorems for the analysis of electrical circuits.
2. Obtain the Steady state and transient response of electrical circuits
3. Obtain frequency response of the electrical circuits.
4. Analyze two port circuit behavior, Filter circuits.

Subject Code: 19EC4PC02L	Subject Name: Microprocessor & Application Lab	L-T-P: 0- 0- 2	Credit: 1
---	---	---------------------------------	----------------------------

COURSE OBJECTIVE:

1. To introduce the basic concept of 16-bit Microprocessor.
2. To become familiar with the architecture and Instruction set of 8086 processor.
3. To provide practical hands on experience with Assembly language programming using 8086 processor.
4. To develop the I/O interfacing skill with 8086 processor like DAC 0800, 8255 PPI, 8253/8254 Timer, DC motor , Stepper Motor etc.
5. To provide the knowledge regarding real time applications of Microprocessors.

10 EXPERIMENTS FROM THE FOLLOWING LIST

GROUP-A: *OPTIONAL*

Programs Involving Arithmetic operations (Any three)

1. Programs for 16 bit addition and subtraction operations using 8086.
2. Programs for 16 bit multiplication and division operations using 8086.
3. Write an 8086 ASM program to find the factorial of a given number.
4. Write an 8086 ASM program to find the square of a number by adding successive odd numbers.
5. Program for decimal arithmetic operation using 8086.

GROUP-B: *COMPULSORY*

Programs Involving Data transfer operation (with and without string)

6. Write an 8086 ASM program to move block of data from memory to memory.

GROUP-C: *OPTIONAL*

Programs Involving Bit manipulation operation (Any Two)

7. Write an 8086 ASM program to separate odd and even numbers.
8. Write an 8086 ASM program for finding out the number of positive, negative and zeros from the given data set.
9. Write an 8086 ASM program to find number of 1's and 0's in a given 16-bit data.

GROUP-D: *COMPULSORY*

Programs Involving Branch/ Loop instructions

10. Programs for Sorting (Ascending or Descending) and Searching (Largest or Smallest) (Using 8086).

GROUP-E: *OPTIONAL*

Interfacing programs (Any Three)

11. Program to generate different types of analog signal using DAC0800 interfacing with 8086.
12. Program to generate square wave at PPI port in BSR and I/O mode mode-0.
13. Program to generate square wave using timer 8253/8254 interfaced with 8086.
14. Interfacing and Programming of DC Motor using 8086.
15. Interfacing and Programming of Stepper Motor using 8086.

COURSE OUTCOME:

1. Understand and apply the fundamentals of assembly language programming on 16-bit Microprocessor.
2. Understand the branching, Loop, string function and Count & Time delay concept of 8086 microprocessor.
3. Familiarize with 8086 microprocessor real time interfaces like DAC, PPI , Timer, Motor etc.
4. Troubleshoot interactions between software and hardware
